Fleetguard® Transmission Filters

Optimal performance of automatic transmission systems depends on excellent quality filtration. As the technological leader, Cummins Filtration® offers a complete line of Fleetguard transmission filtration products and fluid analysis programs as part of your regular transmission maintenance program.

Fleetguard transmission filters are designed and tested in *real world* operating environments to perform with maximum reliability and provide these comparative benefits:

- Higher filtration efficiency
- Exceptional flow without filter plugging
- Superior structural integrity under fluid system pressure
- Longer filter life
- Guaranteed performance which meets or exceeds OEM specifications

Because transmission fluid cools, lubricates and transmits hydraulic power, it is critical to maintain adequate fluid levels in your system at all times. When the fluid level is too low, the converter, bushings, bearings and clutches do not receive an adequate supply of fluid. If fluid levels are too high, they can aerate and cause your transmission to shift erratically or overheat.

For maximum performance and protection, transmission fluid and filters should be changed according to engine manufacturer recommendations. Harsh environments, severe operation or extreme duty cycles may require more frequent change intervals. Transmission system protection is optimized with the Fleetguard Monitor™ oil, transmission and hydraulic fluid analysis testing kits, which provide results within 24 hours and allow transmission system troubleshooting before problems arise. Periodic inspections of drive shaft components, electrical charging system, transmission oil coolers and engine cooling systems should also be performed to identify potential problems and protect against transmission malfunction.

With the broadest range of OE replacement parts for Allison®, GM®, Ford®, Chrysler®, Magnefine®, Mitsubishi®, Nissan®, and Toyota® transmissions, Fleetguard transmission filtration technology leads the market with expert engineering, real world performance, and the most dependable service in the industry.

Section Notes

Notes:

Restriction is the pressure in the filter at a total flow rate of 7.0 gal/min (26.5 L/min).
All filters meet or exceed the OEM specifications for their respective application.
All dimensions are in inches (millimeters).

Media Type Key:

PAPER	Paper based media with phenolic resin
BRASS	Brass screen
STAINLESS	Stainless steel screen
GALVANIZED	Galvanized screen
POLYESTER	Polyester screen cloth
FELT	Phenolic Saturated felt

Part Number	TF15000
OE Part Number	E9TZ-7A098A
Transmission	FORD E40D 2WD
Specification	RWD/4SPD
Model Year	1989+
Configuration	20 Bolt Pan
Media Type	FELT
Flow Restriction	2.4 in Hg (8.1 kPa)
Micron Rating	60

Part Number	TF15001

Model Year	1988+
Configuration	17 Bolt Pan
Media Type	STAINLESS
Flow Restriction	N/A (Screen Filter)
Micron Rating	75

Part Number	TF15051
OE Part Number	31728-41X01
Transmission	NISSAN RE4R01A 4WD 1987-ON MAZDA MPV WAGON 89-ON
Specification	RWD/4SPD
Model Year	1987+
Configuration	18 Bolt Pan
Media Type	BRASS
Flow Restriction	N/A (Screen Filter)
Micron Rating	180/205

Note: All dimensions are in inches (millimeters).

FILTER EFFICIENCY

- Paper Media: 140 Microns @ 50% efficiency @ 0.12 gal/min (0.45 L/min) per ISO 16889.
- Wire Screen: Micron Rating is @ 98.7% efficiency.
- Polyester Media: 140 Microns @ 98.7% efficiency.
- Felt Media: Micron Rating is @ 50% efficiency @ 0.12 gal/min (0.45 L/min) per ISO 16889.
